## Abstract

**CrypWiz<sup>cpz</sup>** is a multiple software project that aims to integrate blockchain services, help the blockchain community to improve effectiveness, to increase security, and to improve the income of those who are active in the field of blockchain.

We believe that merging the advantages of this new technological and economical concepts with years battle-proofed foundations for anonymization of the communications over networks already laid by thousands of cypherpunks and hackers could be the right way to achieve the vision of our project and to move the technology that helps the Internet community another little step forward.

## Introduction

By following industry's best practices, careful project management and development processes, the **CrypWiz<sup>cpz</sup>** ecosystem can extend blockchain and cryptocurrency, while ensuring fast transactions with minimal fees.

Decentralized finance is made possible by using decentralized exchanges in collaboration with liquidity pool smart contracts. For any token on the smart chain to have an availability to be swapped on a decentralized exchange, it must have an available liquidity pool of tokens for swapping. The challenge remains on how to properly incentivize users to keep such liquidity pools maintained.

## Vision

Our vision is to build and bootstrap successful, self-supporting and self-governing decentralized network and ecosystem providing robust, reliable products to the Internet users, taking advantage of up-to-date technology and best-practices, to build ecosystem governed by the community , which we believe could be far more efficient than conventional voluntary or proprietary solutions mentioned earlier.

This whitepaper is intended to only show direction of this project and to explain our goals. The purpose of the **CrypWiz<sup>cpz</sup>** team is to bootstrap and guard all the processes involved in the development and management of the **CrypWiz<sup>cpz</sup>** ecosystem until the network will be mature enough and will reach the final stage when the right open-governance, project management and development processes will be well-established and tested to the degree that the ecosystem could be ultimately put solely into the hands of the community, guided by smart-contracts and algorithms

## Innovation

We want to create new and unique services and products to go beyond blockchain. Duplicating products is not a difficult task. Products need to be redesigned creatively with more features.

## Profitability

We create a context in which possibilities are interconnected. Therefore, using the features is useful for Consumers and token Token Investors and Businesses.

## Easy observation

The biggest weakness of systems is incomplete statistics. At **CrypWiz<sup>cpz</sup>**, we want to publish the most accurate and complete statistics. We put together the prices, trends, security and other factors of a token or coin. We take the price of currencies from all exchange offices, we measure the rank of each currency using all sites so that the user has the best choice.

We offer Crypto Tracker, track the prices of 2000+ Crypto Currencies. Crypto Tracker is an ultimate platform to keep track of the crypto market and prices. It has a clean, user-friendly, contemporary design, and awesome features.

## Ecosystem

We provides user-friendly, efficient and secure crypto solutions and utilizing blockchain technology. We want to create an integrated platform that does not require real money to use digital services and people can use the services in the most convenient way.

At **CrypWiz<sup>cpz</sup>**, we create apps that play an important role in people's daily lives. We will also use API to communicate with other currencies so that it can be used without limitation on different platforms.

The underlying currency used for all transactions on the **CrypWiz<sup>cpz</sup>** platform will be \$CPZ. Investors can purchase this cryptocurrency through CEX and DEX exchanges.

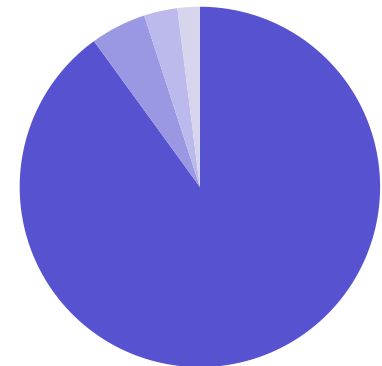

## Deflationary

**3%** Marketing

**5%** Buyback

**5%** Holders

**87%** Buyer's

## Distribution Rewards

Distribution rewards is like a reward system for our utility token holders. The longer you utilize our services and platforms holders will be rewarded with a portion of the 5% of tokens generated from transferring or swapping our utility token for other coins or tokens. This is set in place to reward loyal customers and users of our products and services.

## Buyback

When the buyback function is turned on, tokens are bought back from the market, resulting in an immediate effect on the price. The tokens bought through buyback are immediately burned. This creates a true burn, meaning real value is exchanged for the tokens that are sent to the burn wallet.

## Marketing

We will strive to create a viral marketing campaign and with use of our continually growing community, we will form connections with high level influencers and celebrities to grow **CrypWiz<sup>cpz</sup>** bigger than ever. 3% of each transaction is considered for marketing.

## Token Allocation

Pre-Sale: 5%

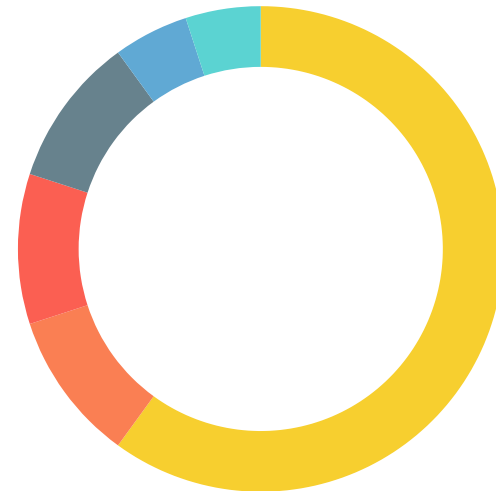

Marketing: 5%

Team: 10%

Liquidity: 10%

Platform: 10%

Circulation: 60%

## Token Information

**CrypWiz<sup>cpz</sup>** is the next evolution of a yield-generating contract on the Binance Smart Chain (BSC)

Network: Binance Smart Chain (BEP-20)

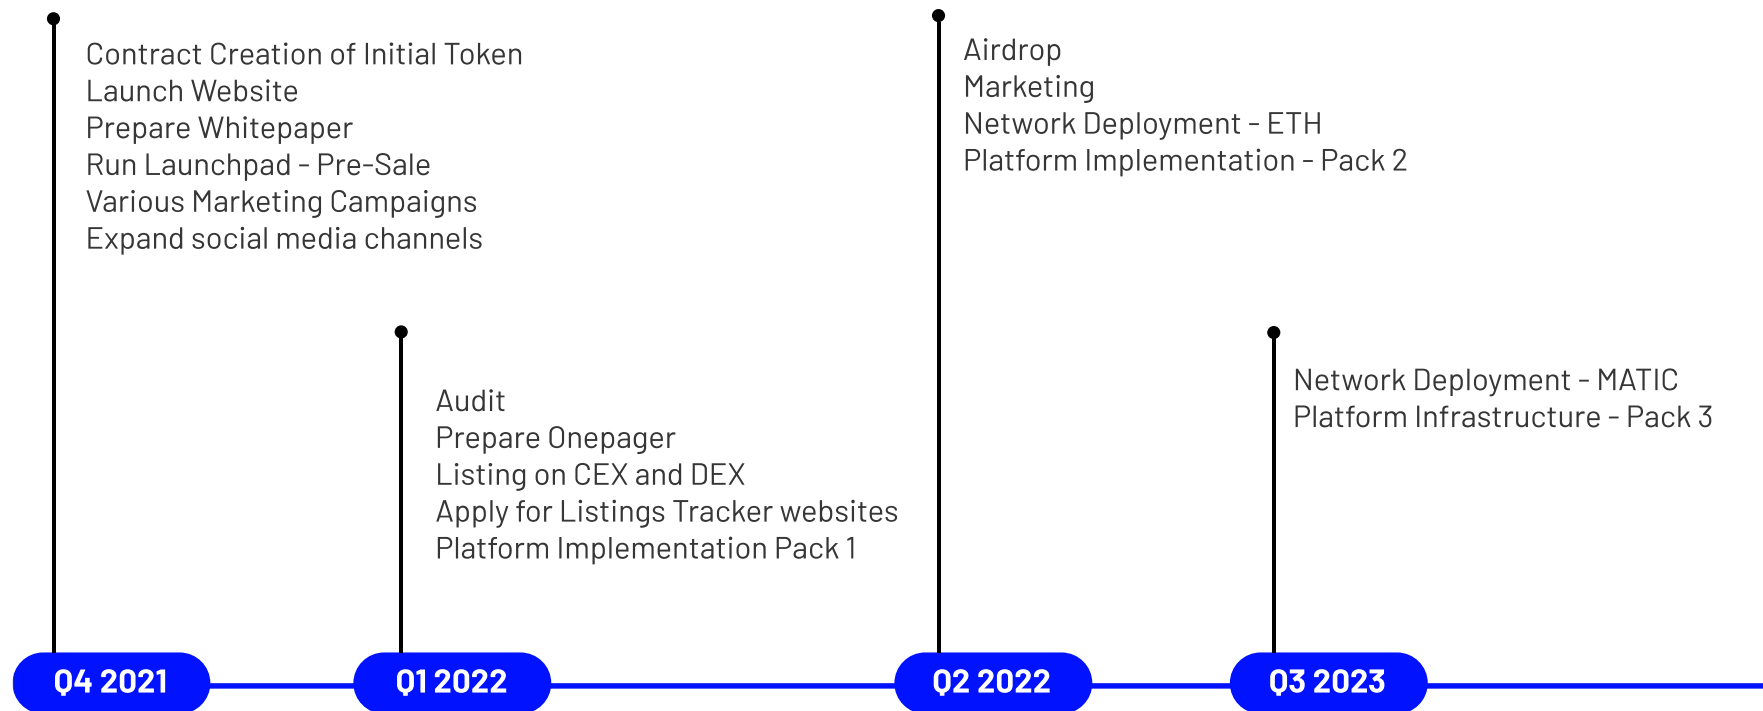

Ticker: CPZ

Contract address: 0x6959b8F9028c471fC3943c2331269ae5781aC279

Decimals: 9

Total Supply: 1,000,000,000,000,000 CPZ

## Roadmap

## Team

For many years each of us have been supporting large enterprises, as well as startups on innovation through design, and reflection about crypto market. Today, thanks to the expertise we acquired, our ambition is to create a useful platform and to develop better tools and services.
